## OVERVIEW

### TESTOMAT 2000® CLT SELF CLEAN

The process photometer Testomat 2000® CLT is a robust wet-chemical online monitor for monitoring the concentration of total chlorine in the measuring range 0 - 2.5 mg/l (ppm) using the photometric analysis principle. The feed water must be clear, colorless and free of undissolved particles.

Instrument operation is based on the DPD method according to EN ISO 7393-2. The analysis is implemented by adding three reagents, after a reaction time of approx. 1 minute (measuring time without flush time) the analysis result is shown. Cleaning of the measuring chamber is carried out after a pre-set number of analyses.

Applications include, e.g., the monitoring of disinfectant dosing in the drinking water field and water treatment at dialysis centers.

Please note that oxidizing agents other than chlorine, e.g. ozone, chlorine dioxide or hydrogen peroxide, are also recorded and increase the measuring result! (For details, see EN ISO 7393 Section 9)
